

Comment regarding RM-10870 submitted by the National Conference of Volunteer Examiner Coordinators.

I fully support this petition. Morse code is an old horse that is ready to die, lets let it go with dignity. For those who argue that it is still an important means of communicating when band conditions are poor, I submit that they should explore digital methods which require very narrow band width. For those who would argue that the "Quality" of the Operator would decline, I submit that they listen to some of the nets on 20 and 40 meters.
